

Quiz Master Android Application Internship

Project Documentation

Intern Information

Intern ID: CITS3045
Name: Harsh Dhakad
Organization: CODTECH IT SOLUTIONS
Domain: Android Development
Project: Daily Quiz Master Android Application

Introduction

This Android application provides an interactive quiz platform using Firebase Authentication and Cloud Firestore. It is developed using Java and XML in Android Studio. Users can register, log in, select quiz categories, answer multiple-choice questions, and track their scores through a modern user interface.

Objective

To develop a modern Android Quiz Master application demonstrating Firebase Authentication, Cloud Firestore integration, RecyclerView, Material Design UI, score calculation, leaderboard management, and cloud-based data storage.

Features

- User Registration
- User Login
- Forgot Password
- Home Dashboard
- Quiz Categories
- Multiple Choice Questions
- Countdown Timer
- Score Calculation
- Result Screen
- Leaderboard
- User Profile
- Coins & Rewards System
- XP & Level Progress
- Achievements

Technologies Used

Java, XML, Android Studio, Firebase Authentication, Cloud Firestore, RecyclerView, Material Design Components, ConstraintLayout, Glide, Lottie Animation, Git, GitHub.

System Workflow

Application Launch → Splash Screen → Firebase Login Check → Login / Registration → Home Dashboard → Select Quiz Category → Load Questions from Firestore → Start Quiz → Submit Answers → Calculate Score → Display Result → Save Score → Update Leaderboard → View Profile.

Firestore Services Used

Firestore Authentication (Email & Password), Cloud Firestore (Users, Categories, Questions, Scores, Leaderboard).

Future Enhancements

Google Sign-In, Online Multiplayer Quiz, Push Notifications, Daily Challenges, Dark Mode, Profile Image Upload, AI-Based Quiz Recommendations, Voice-Based Questions, Multi-language Support.

Conclusion

The Quiz Master Android Application demonstrates Android development using Java with Firestore Authentication and Cloud Firestore. The project is suitable for internship submission.

Note

Screenshots are not included in this documentation. The complete source code is available in the GitHub repository and can be executed using Android Studio.
